

Infant Mortality

Infant Mortality Three-Year Rolling Rate, Per 1,000 Population

This Indicator Measures... the three-year rolling rate of infant mortality per 1,000 live births in Flagler and Volusia Counties.

This is Important Because... infant mortality is the rate at which babies less than one-year old die. It is considered a significant measure of a community's health.

Source: FLHealthCHARTS

Note: The Flagler rate decreased over the reporting period. The Volusia rate decreased until 2013-15 when it began to increase. The three-year rolling rate is an average value of an indicator over three rolling 3-year time periods and were used here to flatten out large fluctuations.

First Trimester Pregnancy Care

Percent of Births to Mothers with First Trimester Care

This Indicator Measures... the percent of births to mothers with first trimester care in Flagler and Volusia Counties.

This is Important Because... the first trimester is considered the most crucial time for the baby's development.

Source: FLHealthCHARTS

Note: After being steady through 2015, the Flagler County rate decreased in 2016. The Volusia County rate fluctuated slightly and decreased over the reporting period.

Teenage Mothers

Rate of Births to Mothers, Ages 10-19, Per 1,000 Population

This Indicator Measures... the total rate of births to mothers, ages 10-19 per 1,000 of the population in Flagler and Volusia Counties.

This is Important Because... statistically teenage mothers are unemployed or under-employed, do not receive and/or complete their education and live in poverty.

Source: FLHealthCHARTS

Note: The Flagler and Volusia Counties' rates decreased over the reporting period. The rate for ages 10-17 is reported on page 26.

Additional note: For information on repeat teen births visit FLHealthCHARTS listed in Data Sources.
